HARP FRONTMAN

*PATENT-PENDING

ABOUT

The Harp Frontman is an active DI Box with an effects loop, it is designed for low impedance microphones allowing the performer to sing and play harp with effects using the same microphone. The pedal has an XLR output to go to a PA and an isolated 1/4" high impedance output to go to a harp or guitar amplifier. The bypass circuit features noiseless switching and LED indicators. The XLR output is driven by a balanced audio driver that is fully specified for high performance audio. The Frontman is also great for recording, providing a balanced and quiet output from the effects loop.

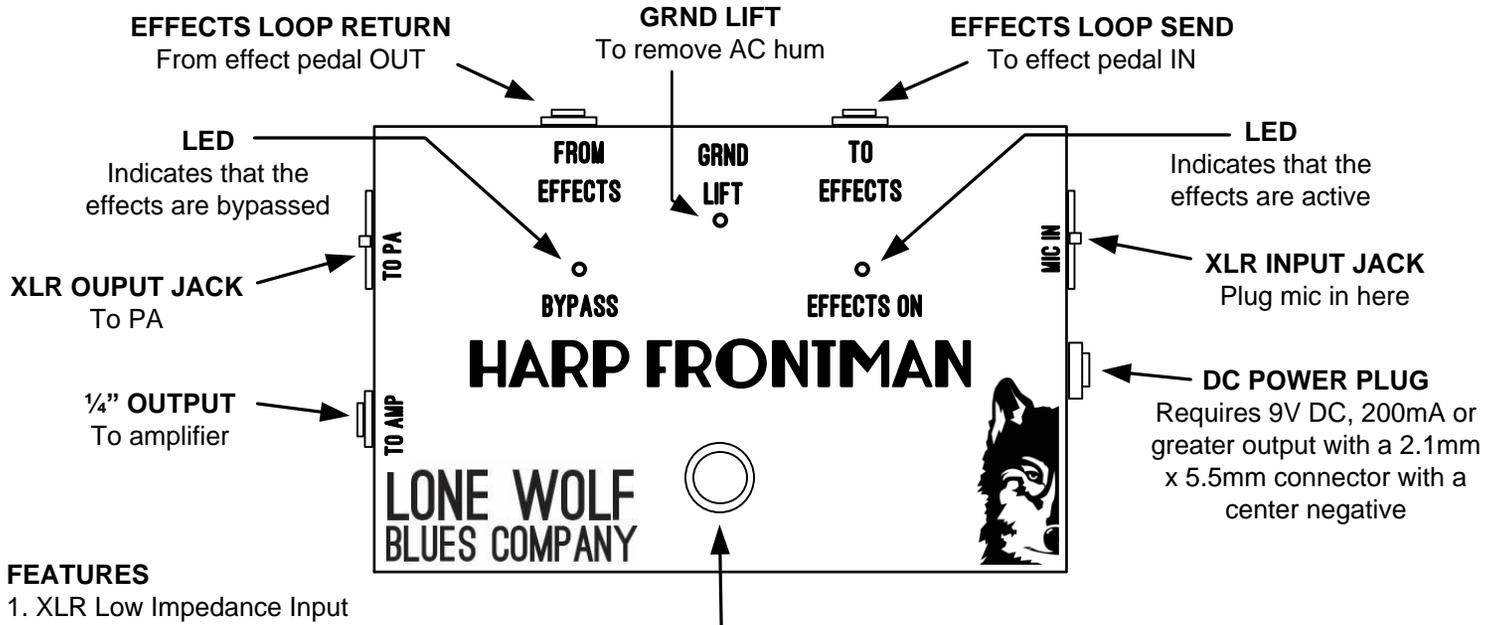

Why is a DI Box important? A DI Box allows for the elimination of unbalanced instrument cables which are for more susceptible to noise and are also limited in length to 20ft due to signal loss. The use of balanced XLR cables provides more options at the PA end, not limited to 20ft, are more available on stage and most importantly, are quieter. DI Boxes eliminate the possibility of ground loop hum and impedance mismatch. The addition of the Ground Lift switch adds another layer of protection against hum.

SETTINGS

There are no settings on the pedal.

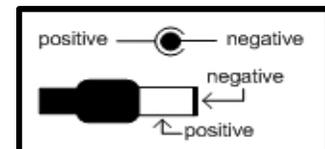

POWER

The Terminator operates on 9 to 18 volts DC. To make it all just a little easier Lone Wolf is offering a power supply for US and EURO customers. The AC adapter requirements are 9 to 18 VDC with a minimum 100mA output and a 2.1mm x 5.5mm connector with a negative center and positive outside. The pedal is always on when the power adapter is plugged into the pedal. **This pedal does not work on battery, this pedal requires a DC power adapter.**

FEATURES

1. XLR Low Impedance Input
2. XLR Low Impedance Output
3. 1/4" High Impedance Output
4. Effects Loop with Bypass
5. Ground Lift
6. Functions as an active DI Box
7. 9V DC Power Adapter Included
8. 5-year warranty on parts and labor
9. If not satisfied, return within 60 days for a refund of the purchase price minus 4% credit card transaction fee

POWER PLUG
